ACKNOWLEDGEMENTS

We would like to acknowledge with appreciation to Survey Instruction Committee, Public Secondary School for organizing this survey camp to enhance our knowledge of surveying and its application. We would like to thank our teachers Er. Keshav Raj Bhusal and all the working staffs and store keepers for their supports, suggestions, management of resources and co-operation throughout the camp. Without their guidance, the report would have been incomplete.

Acknowledgement would be incomplete without a word of appreciation for CTEVT administrator who provided us the working space and homely environment. Sincere thanks to those who are directly or indirectly involved in the preparation of this survey camp report.

This is a survey camp report prepared after the camp conducted for 8 days by the Survey Instruction Committee, Department of Diploma in Geomatics Engineering, Public Secondary School in Siyari-4, Rupandehi. The report contains such contents that symbolize the significance of Cadastral surveying in Geomatics Engineering. The report includes the tasks conducted, the methodologies used, observations and calculations with drawings. The report too includes observations and calculations on Cadastral surveying (Numerical).

This report is mainly emphasized on providing the practical knowledge to the readers about the field work of cadastral surveying.

1.INTRODUCTION

Cadastral surveying is the sub-field of cadastre and surveying that specializes in the establishment and re-establishment of real property boundaries. It involves the physical delineation of property boundaries and determination of dimensions, areas and certain rights associated with properties. This is regardless of whether they are on land, water or defined by natural or artificial features.^[1] It is an important component of the legal creation of properties. A cadastral surveyor must apply both the spatial-measurement principles of general surveying and legal principles such as respect of neighboring titles.

The DGE Survey Camp 2080, organized by the Survey Instruction Committee, Public Secondary School is a part of the three-year Diploma's degree in Geometrics Engineering course, third year first semester, carrying a total of 200 marks. The total duration of the survey camp was 8 days, from 18th jesth to 28th jesth, 2080.

This is a detailed report of the works performed by group C during the camp period. It briefly explains the working procedures and technique along with the observations, calculations, and methods of adjustment of error. In addition, it also contains the main problem faced during work and their solution, results of all calculations.

The work done during the camp duration is:

- Cadastral survey around the public secondary school without traverse.

1.1 Background

The Cadastral Survey has been carried for determining Parcel around Public Secondary School inside Siyari rural municipality with its base station is arbitrary whose coordinate are taken by SW map. Survey has been started from jesth 18th and finished in 28th jesth. This report describes the project area, instrument used, adopted methodology for Cadastral survey and the post processed results.

1.2 Objectives

The main objectives of the study:

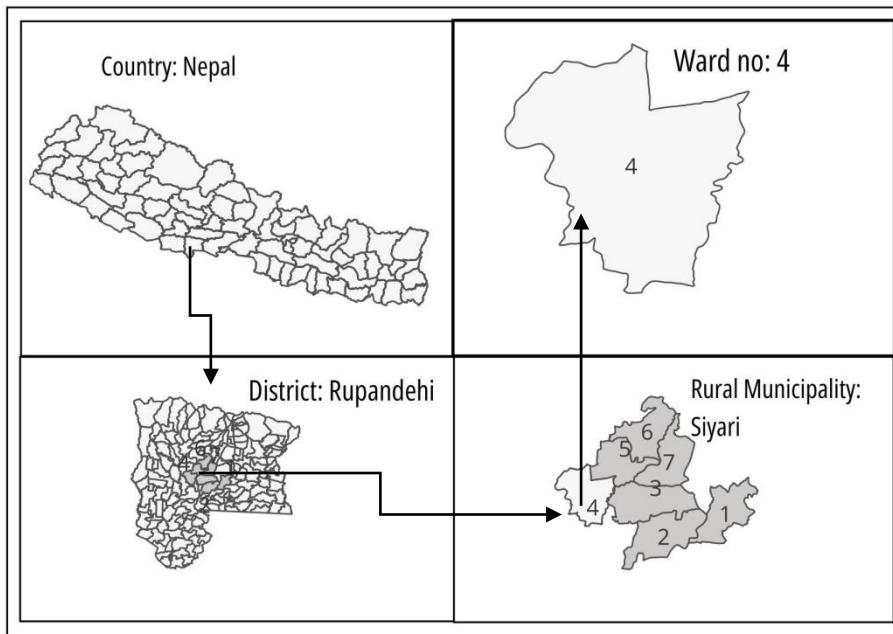

- Cadastral Survey around Public Secondary School without traverse
- Demarcation of Parcel

2. Study Area

The project area lies in Rupandehi district of Lumbini Province. Project area (Siyari Rural municipality) located in 27.566241°N 83.401469°E. There are altogether 7 wards in this rural municipality. Siyari-4, Chhapiya is about 22 km southern west part from Butwal. The area to be surveyed is area under Public Secondary School. The survey location is in our School. Thus, our project area was quite suitable and easily accessible. There is no any need of buses to reach survey site.

- **Country:** Nepal
- **Province :** Lumbini
- **District:** Rupandehi
- **Municipality:** Siyari
- **Ward No.:** 4
- **Location:** Siyari-4,Chhapiya,Rupandehi

Project area is shown in the figure below.

3. Instruments used:

S.N	Name of instrument	Quantity
1	Total station (Pentax R-2505NS)	1
2	Prism	2
3	Prism stand	2
4	Clamp	2
5	Tape (30m)	1
6	Wooden Peg	10
7	Hammer	1

3.1 Total Station

Total station is a surveying equipment combination of Electromagnetic Distance Measuring Instrument and electronic theodolite. It is also integrated with microprocessor, electronic data collector and storage system. The instrument can be used to measure horizontal and vertical angles as well as sloping distance of object to the instrument. In this survey project we used Pentax R-2505NS Total Station.

Fig: Pantex R-2505NS

Features of Pantex R-2500NS Total Station are:

- Long EDM range measuring distance: reflectorless up to 600m and up to 7,000m in prism mode
- Dual display as standard equipment
- Easy transfer to a PC via SD card, USB mini and RS-232C data port
- Pre-loaded PowerTopoLite Software which offers a package of versatile application functions
- Dual battery system for long time operation in the field
- Guiding lights for easy & fast stakeout
- Trigger key on the side cover for quick & light measurement key stroke
- + Dual battery system for long operation time in the field

3.2 Optical survey prism/Prism

Optical Survey prisms are a specially designed retro reflector, specifically a corner reflector that is used to reflect the Electronic Distance Measurement (EDM) beam of a total station. The survey prism reflects the EDM beam back to its source with both a wide angle of incidence and with high precision. Prisms reduce the scatter of the beam as it is reflected back to the total which allows for both a more accurate measurement and a longer range that the measurement can be made.

Fig: Prism

3.3 Prism Stand and Clamp

A prism stand can be used to make prism exact vertical on the station and measure the elevation of a specific ground point by using a sight level, which is important if you want to get accurate results. You can find a survey pole in a variety of materials — from metal and fiberglass to a variety of composites.

Clamp is used to make that stand stable in a vertical position on the station.

Fig: Clamp

Fig: Prism Stand

3.4 Tape

Tape is an accessories used in survey for linear measurement. In this survey 30m tape is used. There are 5 types of tapes available in surveying for linear measurements and they are as follows :

1. Linen Tape
2. Woven Metallic Tape
3. Steel Tape
4. Synthetic Tape
5. Invar Tape

Fig: Tape

3.5 Peg

Peg is used to mark the stations Position in ground. Pegs (see Fig. 8) are used when certain points on the field require more permanent marking. Pegs are generally made of wood; sometimes pieces of tree-branches, properly sharpened, are good enough. The size of the pegs (40 to 60 cm) depends on the type of survey work they are used for and the type of soil they have to be driven in. The pegs should be driven vertically into the soil and the top should be clearly visible.

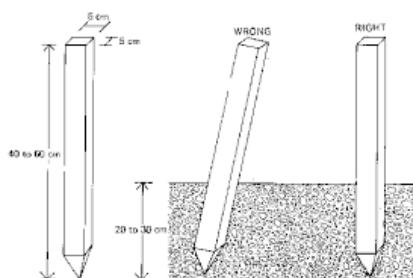

Fig : Peg

4. Methodology

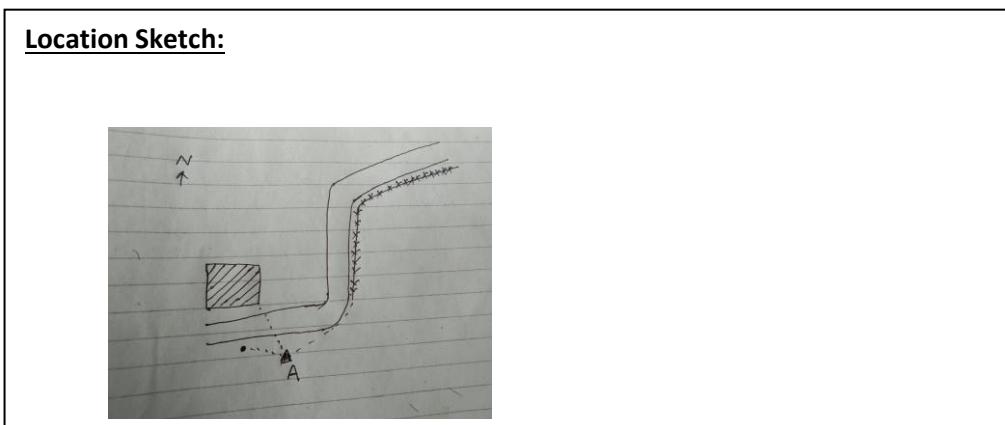

4.1 Establishment of Survey monuments/Bench mark

The main task of the project is to perform Cadastral survey without traverse. So we have fix a temporary control point whose coordinate is taken by using SW map application and whole area to be is covered by establishing 10 offsets. Then the size of 7.5cm*7.5cm*25cm peg are used for monumentation and fixed in different places in the project site.

4.1.i Preparation of D-card

D-Card of station A

<u>LOCATION DETAILS:</u>	<u>DATE:</u> 18 th jesth,2080												
District: Rupandehi	<u>STATION NO:</u> 'A'												
Rural Municipality: Siyari	<u>COORDINATES:</u>												
Ward No: 4	E: - 732790.015												
Village/Area:	N: - 3051910.694												
<u>Description:</u> This control point is located at the south side of road which is in back side of playground. Control point is established on the ground by fixing a wooden peg.	Z: - 89.5												
	<u>References:</u>												
	<table border="1"> <thead> <tr> <th>No:</th> <th>Type</th> <th>Dist(m)</th> </tr> </thead> <tbody> <tr> <td>1</td> <td>Building</td> <td>16.30</td> </tr> <tr> <td>2</td> <td>Electric Pole</td> <td>2.35</td> </tr> <tr> <td>3</td> <td>Boundary</td> <td>7.93</td> </tr> </tbody> </table>	No:	Type	Dist(m)	1	Building	16.30	2	Electric Pole	2.35	3	Boundary	7.93
No:	Type	Dist(m)											
1	Building	16.30											
2	Electric Pole	2.35											
3	Boundary	7.93											

4.2 Adjustment of TS over Station

After performing cadastral survey the Ts should be adjusted over station and for the adjustment of Total station following steps should be follow:-

- At first instrument is setup over the Station ‘A’ with the help of Tripod.
- Then Total Station (TS) is centered by using Laser or plumbing laser which gives a red light on station. Plumb bob can be also use but Laser gives more accuracy than plumb bob.
- After the centering Leveling is done by making bubble in the center of circular level and level tube.
- Now the Total station is adjusted over the station.

4.3 Observation and Sketching

For the observation following steps should be followed-

- The occupied station’s coordinates are taken from SW map application.
- Ts is turns towards the North direction by using compass or mobile.
- Then in that direction a peg is fixed in a known distance ‘D’ to find out coordinate of that point for the back sighting.
- To calculate the coordinate of Back sight station the distance ‘D’ is added to Northing.
- Now we have coordinates of both stations i.e., occupied station and Back sight station.
- After starting survey a sketch of survey should be made.
- Now a file should be created in TS with a suitable name and the survey process is started in that file.
- Then point no, coordinates: - Northing, Easting, z (height) and also the code of that station is entered in occ.
- After that TS is turns towards the back sight station ‘B’ and BS coordinate (N, E, Z) are entered and press Ent key if sighting is correct. The error also can be check by pressing measure or DNEZ key. The error must be 5mm to 10 mm/km.
- Now the Ts is oriented and then a suitable code for parcel is given then readings of corners of parcel are taken and point no should be noted in sketch.

- All the visible parcels should be taken and in case of non-visibility a Offset is thrown at a suitable place from other details (parcels & building corners) are visible.
- Then the instrument is shifted to that offset and again readings are taken from TS and noted in sketch.
- The point code should be different for unalike details.
- Similarly same process is done until the whole detail of survey site is taken.

The Total Station observes the coordinate in Geographic coordinate system which is WGS 84 because we have used WGS 84 projection system for the orientation of first control point. The coordinates of control points , offsets, and details are given below:-

POINT NO	N	E	Z	P-CODE

4.4 Data Extraction and Data Processing

Data extraction is the process extracting collected point data from Total Station through the Bluetooth, USB Cable, Pen drive, SD card. We extracted data through SD card.

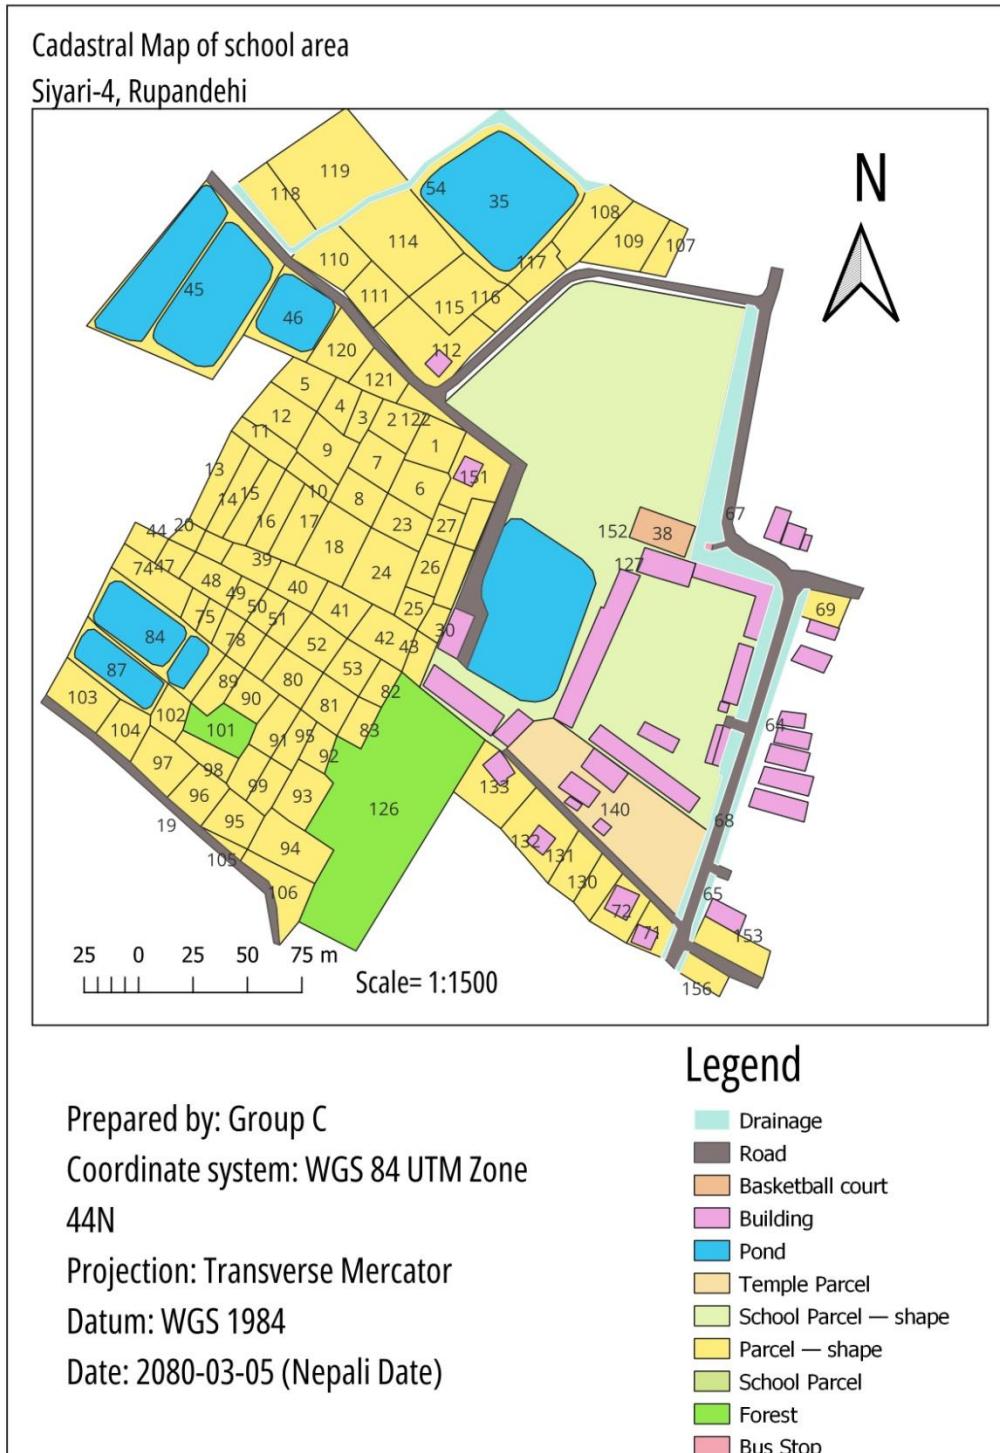

After the data is extracted the data is transferred to the computer and have to be processed. Data processing can be done by using: ArcGIS, QGis, Auto Cad etc.

Steps for data processing:

- Firstly convert the data into CSV Format.
- Then add the data in QGis or any other software and also give the Projection.
- Create shape file to join those points.
- The shape files geometry may be Point, Line, and Polygon according to the required feature.
- Now join those points and create a cadastral map of project site.
- For the base map earth satellite image can be added for checking our point's real world/ground position

5. Result/ Output:

After the data processing a Cadastral map as a output is ready.

6. Conclusion:

From this Practical of Cadastral survey we know how to determine the coordinates (N,E,Z) of control point with the help of SW map application and also know how to take readings of parcels corner by using Pentax R-2500NS Total Station.

This practical is very effective for practical knowledge about Cadastral survey. It helps to improve our skill of surveying and encourage us to our best performance in field as well as office work.
